

“Multicolumn” With Graphics in LaTeX

Michael Doxsey - Technical Support Supervisor, Personal TeX, Inc.

December 15, 1998

The code below, enables the user to include graphics, in their multicolumn LaTeX document.

```
\begin{center}
\begin{tabular}{p{1in}|p{2in}|p{1in}}
1. Hi you all & Even a silly picture\par needs to know math. \par
\vspace*{1.2in} \special{wmf:multi.wmf x=1in y=1in} & $ \mbox{Area}
= \pi*r^2 $\backslash
\end{tabular}
\end{center}
```

Produces:

1. Hi you all	Even a silly picture needs to know math.	Area = $\pi * r^2$
	 Multi-Column w\Graphics	

Thanks to Anita Hoover (consultant to Personal TeX, Inc.) for the code.
